**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1,3-15 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art cited does not anticipate individually or teach in combination the following limitations:
  - A light guide plate provided with an incidence side end face, a distal side face located oppositely to the incidence side end face, an emission face outputting light inputted from said incidence side end face and a back face located oppositely to the emission face, allowing the light inputted from said incidence side end face to be outputted from said emission face during traveling; at least a part of said emission face providing an emission promotion surface which has a plurality of first slopes and a plurality of second slopes; said first slopes being arranged repeatedly at intervals along a direction from said incidence side end face towards said distal side face; said second slopes being arranged as to fill up the intervals respectively; each of said first slopes being inclined as to have a normal leaning to the distal side face; each of said second slopes being inclined as to have a normal leaning to the incidence side end face and to be steeper than adjacent first slopes on both sides thereof wherein inclination angles of said first slopes get smaller gradually with an increasing distance from said incidence side end face.
  - A light guide plate provided with an incidence side end face, a distal side face located oppositely to the incidence side end face, an emission face outputting light inputted from said incidence side end face and a back face located oppositely

to the emission face, allowing the light inputted from said incidence side end face to be outputted from said emission face during traveling; said back face providing a light gathering function surface which inner-reflects light as to gather the light around a normal direction of said emission face; said emission face having emission promotion areas arranged repeatedly along a direction from said incidence side end face towards said distal side face; said emission promotion areas having first and second slopes, respectively; said first slopes being arranged repeatedly at intervals along a direction from said incidence side end face towards said distal side face and further being configured as to give a gently decreasing thickness to the light guide plate with an increasing distance from said incidence side end face; said second slopes being arranged as to fill up the intervals respectively and further being configured as to give a sharply increasing thickness to the light guide plate with an increasing distance from said incidence side end face.

- A light guide plate provided with an incidence side end face, a distal side face located oppositely to the incidence side end face, an emission face outputting light inputted from said incidence side end face and a back face located oppositely to the emission face, allowing the light inputted from said incidence side end face to be outputted from said emission face during traveling; at least a part of said emission face providing an emission promotion surface which has a plurality of first slopes and a plurality of second slopes; said first slopes being arranged repeatedly at intervals along a direction from said incidence side end face towards said distal side face; said second slopes being arranged as to fill up the intervals respectively; each

of said first slopes being inclined as to have a normal leaning to the distal side face; each of said second slopes being inclined as to have a normal leaning to the incidence side end face and to be steeper than adjacent first slopes on both sides thereof; and wherein inclination angles of said second slopes are defined so that light outputted toward a main direction of emission from said emission face avoids from being incident to said second slopes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
